

Non-Ionising Radiation – also known as Electro-Magnetic Fields (EMF)

Have you heard that huge **‘5G monopoles’** and **mini-5G antennae** may be installed near you?

“China is ahead of us.”, “Wuhan became the first ‘5G city’ in 2019.”, “5G is still not live in the UK.”, “4G-LTE signals may cause mobiles to show 5G.”* Chesterfield 27/07/22

While **all electrical devices generate EMF**; mobiles, Wi-Fi, powerlines & cell towers are often the most polluting. Electro-sensitive people often feel high levels of EMF, while others are oblivious to potential harms from our increasing exposure.

Moderate levels can cause; fatigue, headaches, tinnitus, earache, dizziness, sleep disruption, skin tingling, concentration problems, muscle pains...

High levels have been associated with; heart troubles, miscarriages, Alzheimer’s & some cancers.

For your safety and to help understand the impact of 5G installations our home surveys start at £50
