

A Highly Effective Placebo

An illustration of how an illusion of efficacy can be established for any treatment simply by shifting the window of observation.

Based entirely on the work of [Joel Smalley](#) who was inspired by Professor Fenton of Oxford, UK

Either of the links below will take you to a video of exactly 5 minutes that demonstrates that the system selected for recording vaccine efficacy will give a treatment with a zero (0%) efficacy, an apparent (but **untrue**) efficacy of about 90%.

>>> [A Highly Effective Placebo - by Joel Smalley \(substack.com\)](#) <<<

>>> <https://metatron.substack.com/p/a-highly-effective-placebo> <<<

It is best to watch and listen carefully to Joel Smalley's 5 minute video, before reading this postscript.

The postscript is my edit of that by Joel Smalley. I edited it because I found his first sentence too long for me. You'll see in his postscript online he says this is "hypothetical". Whereas, I believe many governments have now admitted to using this method for falsifying efficacy.

Postscript

Now imagine, that the "vaccine" increased infections and deaths.

Using the methodology adopted (in 2021) worldwide by public health authorities, infections and deaths within 2 weeks of the injection will have been added to infections and deaths of the unvaccinated.

This means that the worse the vaccine is, the better the vaccine efficacy becomes.
